

Demo

Making a TODO List app

- How to use Xcode/Swift Playgrounds to create an app
- SwiftUI basics: View, modifiers, and State
- SF Symbols
- Wrapping other UIKit components for SwiftUI

If you really want to use Storyboard

Sure...

```
struct Storyboard: UIViewControllerRepresentable {  
    let name: String  
  
    func makeUIViewController(context: Context) -> UIViewController {  
        let storyboard = UIStoryboard(name: name, bundle: nil)  
        return storyboard.instantiateInitialViewController()!  
    }  
  
    func updateUIViewController(_ viewController: UIViewControllerType,  
                                context: Context) { }  
}  
  
// use in SwiftUI  
  
Storyboard(name: "Main")
```
